Did you know that when you save data on most Revexp and Salary forms it gets pushed automatically to PennHist? A Planning Cloud feature called Smart Push works behind the scenes taking a copy of the data in the account combination you've budgeted and placing it in the same location in PennHist. This includes employee benefits on Salary forms: Planning Cloud knows the EB rates and calculates as you save salaries. If you see this message when you hit Save on a form, you'll know that Smart Push is working in the background along with any business rules attached to that form.

Keep in mind the Smart Push functionality does not apply to these items:

1. Copy Adjust Revexp business rule
2. Copy Adjust Salary business rule
3. Tweak on Steroids form

Data will be moved to PennHist overnight when working with these business rules or forms. Additionally, dependent tuition in grants and service centers along with the overhead recovery for an entire school or center is still moved to the 000000 Fund overnight and will be available the following morning (Note: Overhead on the individual gift or endowment is calculated and pushed as you save).
